HS.data function

Purpose in Life PL High scorer: Has goals in life and a sense of directedness; feels there is meaning to present and past life; holds beliefs that give life purpose; has aims and objectives for living.

R: Seven data sets showing a bifactor solution.

Another complex scenario that abates the use of Pratt's measures is the problem of multicollinearity.

[PDF] Simultaneous Factor Analysis in Several Populations

The purpose of this paper is to compare the fit for bifactor and higher-order models using multiple mental ability test batteries and datasets from various disciplines in psychology e.

Aplikasi Model Persamaan Struktural pada Program R (Studi Kasus Data Pengukuran Kecerdasan)

When an oblique solution is chosen, reporting only the pattern matrix was the most common practice, followed by reporting only the structure matrix.

Review: Factor Analysis by Karl J. Holzinger on JSTOR

The other nine entries are journal articles that provided reviews or guidelines on the use of factor analysis. Two competing hypotheses for the modeling of g are tested in this paper; the higher-order model and the bifactor model. Additionally, he suggested that use of the higher-order model requires an explanation of why there should be a proportionality constraint, whereas use of the bifactor model does not.

The Bifactor Model Fits Better Than the Higher

Point estimates and confidence intervals for variable importance in multiple linear regression.
