Complexometric and argentometric titrations using thread

Generally, only titration reactions which form labile complexes are useful.

Complexometric titrations: new reagents and concepts to overcome old limitations

If the metal—indicator complex is too strong, the change in color occurs after the equivalence point.

Complexometric Titrations: Competition of Complexing Agents in the Determination of Water Hardness with EDTA

Journal of Chemical Education 2021, Article ASAP. Titration is quantitative chemical analysis used in laboratories to find out the concentration of an identified analyte a substance to be analyzed.

Complexometric Titration of Zinc: An Analytical Chemistry Laboratory Experiment

The complex can have either a positive or a negative charge, or it can be neutral. Note that metal complexes of EBT are generally red in colour.
