Polymer Chemistry the Basic Concepts: Books

Because of the nature of carbon, one or more other atoms can be attached to each carbon atom in the backbone. The ultimate natural polymers are the deoxyribonucleic acid DNA and ribonucleic acid RNA that define life.

Polymer Chemistry

Step by step, readers will obtain a detailed and well-founded understanding of this vibrant and increasingly important subject area at the intersection between chemistry, physics, engineering and the life sciences. Almost all synthetic polymers are derived from

Polymer chemistry : the basic concepts : Hiemenz, Paul C., 1936

This 2nd edition is nearly a total rewrite. Amorphous polymers are generally transparent. The thermal underwear that many skiers wear is made of polypropylene and the fiberfill in winter jackets is acrylic and polyester.

Polymer chemistry

You generally think of crystalline structures in table salt and gemstones, but they can occur in plastics.

Basic concept of polymer

Thermoplastic polymers include , , , , , , and. And anti-thrombogenic material, such as heparin, can be incorporated into flexible PVC catheters for open heart surgery, dialysis, and blood collection.

Polymer Chemistry

PVC is used to make medical tubing and blood bags that extend the shelf life of blood and blood products.

Basic concept of polymer

The first manufactured polymeric fiber was Rayon, from cellulose, in 1910. The chemist first proposed that polymers consisted of long chains of held together by , which he called.
