

# Desmoinesian Brachiopoda and Mollusca from southwest Missouri

University of Missouri Press - Biogeochemistry of nautiloids and paleoenvironmental aspects of buckhorn seawater (Pennsylvanian), Southern Oklahoma

Description: -

-

Linotype.

Graphic arts -- Great Britain

Printing -- Great Britain.

China -- Biography

Philosophy in literature.

Proust, Marcel, 1871-1922 -- Philosophy.

Proust, Marcel, 1871-1922.

Political corruption -- China.

Political ethics -- China.

Paleontology -- Missouri

Paleontology -- Pennsylvanian.

Mollusks, Fossil.

Brachiopoda, Fossil. Desmoinesian Brachiopoda and Mollusca from southwest Missouri

-

University of Missouri studies (1926) -- v. 36

University of Missouri studies -- v. 36 Desmoinesian Brachiopoda and

Mollusca from southwest Missouri

Notes: Includes bibliographical references (p. [195]-201).

## The Dinosaurs and Prehistoric Animals of Missouri

Diameter of shell is about 2. Halwaxiids and the early evolution of the lophotrochozoans. The illustrated example here closely resembles examples illustrated in Shimer and Shrock 1944 and it is compared to them but not actually assigned to that species.

## Fossils from the Hughes Creek Member, Foraker Formation

Condra 1927 named the Long Creek Limestone for the beds that immediately overlie the Hughes Creek Shale for cavernous vuggy? Some gastropods are scavengers, feeding on dead plant or animal matter; others are predators; some are herbivores, feeding on algae or plant material; and a few species are external or internal parasites of other invertebrates. Anthracoceras discus Frech from the Golonóg sandstone and the age of this rock. It is thought that the delimiting factor responsible for the rather poor megafossil exploitation can be attributed to the dominantly muddy substrate, which most organisms find as a stress environment.

## Lower Permian Gastropods of Shakhtau (Asselian)

About the Heterostropha Gastropoda from the Carboniferous and Permian, Mitt. Some species found in Shakhtau were previously known from Tethyan assemblages of Fergana: Bellerophon karatshatzensis, B.

## New Carboniferous brachiopod genera from Huai Bun Nak, North

Geological Survey of Illinois, 2: 145-411. Bulletin of Geosciences, 78: 53-65. The origin of multiplacophorans—convergent evolution in aculiferan molluscs.

## **Stratigraphy, paleogeography and depositional environments of the Upper Middle Carboniferous (Desmoinesian) cyclothemic Exello Black Shale of the Midcontinent Region, USA**

These fossils are commonly found only in the offshore, dysaerobic facies of the Hughes Creek. This genus may be rather long-ranging, the earliest species appearing in the Mississippian of the mid-continent.

### **The paleoecology of a “middle limestone member” (Leavenworth) of an upper Carboniferous (Stephanian) cyclothem midcontinent, U.S.A.**

America 47, 1177—1206, 3 figs. Prace Instytutu Geologicznego, 61: 89-134.

#### **Composita subtilita**

Although the Leavenworth Limestone is unrecognizable per se within this clastic wedge, it does extend farther southward than any other Late Carboniferous unit. Articulated halkieriids from the Lower Cambrian of north Greenland.

#### **Ancestral morphology of crown**

Usually only a few species are found at one place, but each species will have a rather wide range. The topology shown is for analysis using a 549 Ma maximum for the age of the molluscan crown group.
