Should intensity-modulated radiation therapy be the standard of care in the conservatively managed breast cancer patient? Saunders Co, Philadelphia, pp 183-191, 1993. The effect of radiation dose on WM volume change was illustrated for three intervals: WM volume increased for median dose levels of less than 40 Gy; no change was observed for median doses of 40 Gy; and median dose levels of greater than 40 Gy were associated with decreased WM volume over the time interval of the study.
