American Association of Neurological Surgeons. Anatomically, the obturator internus is deep to both the piriformis muscle and the sciatic nerve, and it parallels the piriformis in its attachments. For example, would the management of

Filesize: 11.58 MB

acute lumbar fracture be different than management of a strain? Third, there was a number of studies available to review, although some were deemed inappropriate for inclusion.

## Vertebral tumor

Finally, flow-diverting stents are more technically challenging to place, and procedure-related morbidity and mortality may improve as familiarity increases. Annals of Physical and Rehabilitation Medicine.

## Phantom pain

These data suggest that, even though the flow-diverting stent is associated with variable degrees of angiographic improvement in the acute stage, the risk of rebleeding from the dissecting aneurysm is relatively low. Furthermore, subsequent pathology in the remaining VA is much more difficult to treat after occlusion.

### **Diagnosis and Treatment of Pain of Vertebral Origin: A Manual Medicine Approach by M.D Walter L.**

This content is owned by the AAFP. This relative success with parent artery trapping may result from the careful selection of patients who may tolerate obliteration of PICA.

### **Osteopathic Manipulative Treatment: A Primary Care Approach**

During follow-up evaluation for 2. Nonetheless, the high rebleeding rate suggests that stent placement is suboptimal for control of VADA.
