Forest ecosystem of Southeast Alaska.

**The forest ecosystem of southeast Alaska. 5, Soil mass movement (Book, 1974) [sdk.mavlink.io]**

Established by President Theodore Roosevelt in 1907, the Tongass is the largest of 154 national forests across the country. Another presidential proclamation made by Roosevelt, on 10 September 1907, created the Tongass National Forest.

**Southeast Alaska Ecosystems (U.S. National Park Service)**

In Alaska, there are 129 million forested acres across the state.

**Opinion: Sea otters are the defenders of kelp forests, ecosystems**

The primary tree species are Sitka and white spruce. Department of Agriculture, Forest Service, Pacific Northwest Research Station. For example, trampling by foot or vehicle traffic, changes in nearshore currents caused by docks and other shore-fast structures, and marine oil spills are threats to intertidal communities.

**Tundra, Alaska Department of Fish and Game**

The forest has close to one million visitors each year. Landlocked, its fate is determined by the balance between inflowing water and evaporation.

**The forest ecosystem of southeast Alaska: 1. The setting.**

The Tasmanian kelp forests have been denuded by increasing urchins just as in Alaska. Department of Agriculture, Forest Service, Pacific Northwest Research Station. The Forest Service has also set aside old growth reserves that are predominately higher value timber with larger

trees.

**The forest ecosystem of southeast Alaska: 6. Forest diseases.**

In addition, droughts, wildfires and extreme storms could become more frequent in some areas. Effective management practices on such terrain consist of identification and avoidance of the most unstable areas and careful control of forest harvesting operations in questionable zones.

**The forest ecosystem of southeast Alaska: 5. Soil mass movement.**

Along with its vast woods, the Tongass features 27,000 km of pristine creeks, rivers and lakes, including important salmon-spawning streams. Damage-prone stands should be identified and harvested before insect attack or salvage-logged following outbreaks.
