Factors 1 , 2 , and 4 had significant single effects on biodegradation. A list of specific conclusions regarding the RBC process for nitrifi- cation is presented.

Items where Year is 2008

Nitrification rates are more sensitive to low temperatures than organic removal rates. Results regarding cul- verts suggest that the detention provided during floods by backwater in streams passing through small culverts has a significant flood retardation effect. Potential impacts of climate change on agriculture in Norfolk.
