The Rise of Anti

Most importantly, the findings depend on counterfactual estimates of what smoking prevalence would have been in the absence of tobacco control.

Surgeon General's Reports on Smoking and Tobacco Use

The medical community fiercely debated how and why smoking caused cancer in some people but not others. In observational studies and trials some subjects may report that they are former smokers, even though they continue to smoke; the resulting misclassification tends to result in underestimation of the benefits of cessation.

Read the Surgeon General's 1964 report on smoking and health

The quit ratio has increased among men and women, among blacks and whites, and among all age and education subgroups. Since then, the rate of tobacco use in the United States has significantly decreased but there is still work to do. There are marked differences in deaths from malignant diseases of the respiratory system; the age-adjusted death rates per 100,000 U.

The Surgeon General's 1990 Report on the Health Benefits of Smoking Cessation Executive Summary

There were only two causative inferences—that is, only two health outcomes that the authors felt were positively shown to have been directly caused by smoking: chronic bronchitis and lung cancer. Smoking Cessation and Body Weight Change Chapter 11. Department of Health and Human Services, Public Health Service, Centers for Disease Control, Center for Health Promotion and Education, Office on Smoking and Health.

History of the Surgeon General's Report on Smoking and Health

Main Outcomes and Measures Number of premature deaths avoided and years of life saved were primary outcomes. Men reached their maximum

smoking rate before 1964, but the level in 1964 was chosen as the primary counterfactual with bounds that decline to 60% or return to 80% ever-prevalence at age 30 years.

Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service [Cover]

The Cancer Intervention and Surveillance Modeling Network CISNET estimated 800 000 lung cancer deaths avoided between 1975 and 2000 as a result of tobacco control.

History of the Surgeon General's Report on Smoking and Health

This reduction is the result of people smoking fewer cigarettes or quitting altogether 15. Smoking Cessation and Nonmalignant Respiratory Diseases Chapter 8.
