Lung Cancer: Thoracoscopy

Your doctor and nurse will ask you about your pain often and give you medication as needed. Chest tubes are monitored closely for signs of fluid or air accumulation in the lungs that can lead to lung collapse. I am proud to have practiced at Albany Med since 1978, having also completed my residency training here.

Print

Usually the physical therapist supervises these exercises, but the nursing staff must coordinate them with other aspects of patient care. For example, your healthcare provider might need to remove part or all of a lung because of traumatic injury, infection, or cancer.

Lung Cancer: Thoracoscopy

These entry points landmarks are marked directly onto the patient's skin. Even lumbar placement can be efficacious, particularly when used with hydrophilic opioids such as morphine.

Preventing and Treating Pain after Thoracic Surgery

This multidisciplinary team is personalized to your individual needs and includes nurses, respiratory therapists, the pain service, pharmacists, and physical and occupational therapists. See text for additional details. Spread them out over the course of the day.

General and Thoracic Surgery

It is not intended as medical advice for individual conditions or treatments. In the Post Anesthesia Care Unit PACU When you wake up after your surgery, you will be in the Post Anesthesia Care Unit PACU.
