h2g2

La fosa nasal es dos veces más larga que alta.

A new species of *Anteophthalmosuchus* (Crocodylomorpha, Goniopholididae) from the Lower Cretaceous of the Isle of Wight, United Kingdom, and a review of the genus

Abbreviations: premax: premaxilla; pab: preantorbital body; anb: anterior body; jur: jugal ramus. This was based on a single find in the Ghobi desert.

Neovenator

The build of an adult Neovenator is not viewed as that of an endurance pursuit animal, but probably that of an ambush creature or one that fed on carrion when necessary.

Neovenator

Our identification of this structure in Neovenator as the ophthalmic and maxillary branches of the trigeminal nerve is consistent with its termination at numerous neurovascular foramina that pepper the bones of the skull Figs and , ,. Monograph of the Palaeontographical Society. As Neovenator is believed to be completely terrestrial, unlike the modern species, it is assumed that these sensory organs were used for other purposes, such as sensitivity to pressure and temperature, controlling jaw pressure and precision feeding.

h2g2

This is guesswork, and more remains are needed to learn more about this animal. By 1996 it was obvious that the Island had a new dinosaur and its name *Neovenator salerii* was announced in a research paper by Steve Hutt, Dave Martill and Mike Barker. The future It is thought by some researchers that fossil material from the UK mainland might also be *Neovenator*.
