The role of impulsivity in the association between childhood trauma and dissociative psychopathology: Mediation versus moderation

It reviews research related to trauma, personality disorders and eating disorders and how they are all intricately related. Psychiatric Clinics of North America, 29 1 , 63 Russell, G. Allowing for the development of grief and anticipating its possible effects normalises it and helps the client keep in mind how she will feel in the future.

All orders are dispatched as swiftly as possible! The authors focus on the subset of eating disordered patients who manifest symptoms of dissociation impulsivity and report a history of childhood trauma.

Eating Disorders

This book is relevant for clinical researchers as well. In EDs, some parts are dissociated from the body, but in severe cases such as AN or BED, it is difficult to find parts that do not reject the body and want to be part of it. It is emotional but very inspirational and powerful to see how she came through so much.

Eating disorders and dissociation

Only by addressing the trauma in a healthy way can an individual affected by an eating disorder or co-occurring conditions expect to make a meaningful recovery.

These parts are described below: The Little Girl Who Never Was is the most damaged part and the one that usually generates more defences. This will be a constant in treatment, since in most cases these clients lacked a compassionate adult attachment figure who understood and explained what they did not understand. This article presents a general review of eating disorders, explaining their origins and most significant peculiarities.
