### Pulmonary circulation : advances and controversies

End-tidal carbon dioxide during cardiopulmonary resuscitation in humans presenting mostly with asystole: a predictor of outcome.

### The History of Cardiopulmonary Bypass: Medical Advances

Additional studies should be carried out to definitely clarify this question; data currently available, however, suggest that the use of isolated circulatory support is better than indifference, resulting either from ignorance of the BLS measures or from the resistance of the first aid personnel in performing mouth-to-mouth ventilation until the arrival of ACLS. Comissão de Ressuscitação Cardiorrespiratória - Cerebral. The first human trial of an sGC stimulator, Riociguat compound BAY63—2521, in 19 subjects demonstrated a significant improvement acutely in pulmonary haemodynamic parameters and cardiac index in patients with PAH in a dose-dependent manner.

### Pulmonary embolism: update on management and controversies

In experimental studies, external chest compression interposed with abdominal compression revealed increase in SP and DP in the aorta, of the coronary perfusional pressure CPP and of the venous return to the heart, resulting in the elevation of cardiac output. In further clinical and experimental studies, not only absence of the desired effects but also harmful effects with its use were evidenced, as well. When the woman returned she was naturally very angry and upset, but Harvey eventually silenced her by stating that he was the King's Physician, sent to discover whether she were a witch, and if she were, to have her apprehended.

### Recent advances in the management of pulmonary arterial hypertension

Witnessing patients with this deadly diagnosis, he soon began to formulate the idea that the solution would come from some sort of temporary mechanical assistance that supported the circulation and took over the oxygenation. The is a medical society founded in 1831 based in The Medical Society of London, Chandos Street, in Cavendish Square.
