

Outbreaks of the western spruce budworm in the American northern Rocky Mountain area from 1922 through 1971

Intermountain Forest & Range Experiment Station, Forest Service, U.S. Dept. of Agriculture
- ELECTROPHORETIC TECHNIQUES FOR DETECTION OF GLYPHA FUMIFERANAE , AN
ENDOPARASITOID OF WESTERN SPRUCE BUDWORM, Entomologia Experimentalis Et
Applicata

Description: -

-

Trial practice -- Michigan.

Personal injuries -- Michigan -- Trial practice.

Fire fighters -- Pensions -- Colorado.

Police -- Pensions -- Colorado.

Tropics -- Congresses

Ocean-atmosphere interaction -- Atlantic Ocean -- Congresses

Oceanography -- Atlantic Ocean -- Congresses

Poetry -- Collections

Whalebone

Jainism -- Social aspects.

Art metal-work.

Tamil Nadu (India) -- Religious life and customs.

Fasts and feasts -- Hinduism

Festivals -- India -- Tamil Nadu.

Germany (West) -- Economic policy.

Western spruce budworm -- Rocky Mountains Region. Outbreaks of
the western spruce budworm in the American northern Rocky
Mountain area from 1922 through 1971

Spruce Budworm in Forest
Management Using Simulation Models**

Franco -ponderosa pine *Pinus ponderosa*
var. The efficiency of electrophoresis as a
tool for routine detection of parasitoids is
discussed.

Filesize: 16.33 MB

The Practice of Forest Insect Management

Judicious use of ground-fire, thinning, and other silvicultural treatments that favor seral non-host conifers, reduce stand density, and minimize the number of canopy layers in managed stands would reduce the amount and quality of budworm habitat and significantly reduce the risk of damaging outbreaks.

Fortunately, much basic information useful for these studies exists in numerous reports that document details of the chronology, geographic distribution, and general severity of many of the budworm outbreaks in the two Forest Service Regions. Hymenoptera: Ichneumonidae were assayed electrophoretically to identify isozyme bands diagnostic for the parasitoid. *Journal Entomologia Experimentalis Et Applicata* — Wiley Published: Sep 1, 1981 APA CASTROVILLO, P.

Additionally, relatively vigorous and productive trees tended to be less susceptible as evidenced by reduced larval weight to budworm of either sex. Paper PNW-230; no copy T6 Wiitala, Marc R. Male budworm from trees high in foliar concentrations of alpha-pinene, myrcene, terpinolene, citronellyl acetate, and bornyl acetate weighted less than those from trees lacking these characteristics.
