What's that you're eating? Social comparison and eating behavior

Also, it is clear from empirical studies that people tend to eat most or all of the food that they serve themselves.

Lost your appetite? Try inviting yourself to dinner

Furthermore, since most of the studies were conducted in high income countries, results may not be applicable in low to middle income countries.

The social facilitation of eating. A review

One important aspect of social facilitation effect that has not been mentioned so far is that it is confined to friends and family. The sample size was calculated to provide 80% power to detect small-to-medium effects. Testing and data collection were performed by H.

What's that you're eating? Social comparison and eating behavior

As comparing ourselves to others can change not only how we feel but how much we eat, clearly social comparison with respect to eating is worth further study. Participants reported their gender, age in years, height in centimeters, weight in kilograms, and ethnicity. This meant that regardless of study design, methodology or measurement tools, results were considered as consistent if the relationship between the exposure and the outcome for a given construct physical activity or eating behaviours were similar positive or negative.

Social Facilitation and Allelomimetic Behavior in Dogs: I. Social Facilitation in a Non

Apparently the same processes that push us to make upward and downward comparisons of ourselves with others on so many other attributes apply equally well to eating. This complicit overindulgence may be especially attractive to dieters, who are often looking for an excuse to overeat; but it is attractive to everyone.

What Is Social Facilitation?

In fact, of course, there was no other participant, everyone got the same sized slice of pizza, and our interest was only in how our students reacted to what they thought someone else was getting compared to what they themselves were given. Salvy SJ, Roemmich JN, Bowker JC, et al. Our basic drive to evaluate ourselves by comparing ourselves to others, especially similar others like our peers according to Festinger extends to what and how much food we eat.

The social facilitation of eating or the facilitation of social eating?

Pleasures and stress of eating alone and eating together among French and German young adults. But why this is the case is unclear.
