Shorter contributions to general geology, 1916

Original Vintage Publication, Not a Modern Reprint.

The flora of the Fox Hills sandstone

Fox Hills Formation ammonoids normally occur in concretions, which are cracked to reveal the ammonoids and other sea life such as bivalves.

Fox Hills Sandstone (SDKfh;0)

Correlation with other units in south-central WY of the same general age shown on table 1.

New fence to protect Niwot's rare Fox Hills Sandstone formation

The surficial aquifers generally are thicker and more extensive in the northern one-half of the Denver Basin, where they supply water for irrigation, stock, and domestic use. Named as top formation of Upper Cretaceous series, top of Upper Cretaceous.
