Interactions between deer and vegetation in Southern Ontario: Monitoring and restoration of overgrazed plant communities in Rondeau and Pinery Provincial Parks

Further, the factors directly responsible for the changes in their numbers are somewhat different from those affecting deer. There is also a large ice pad for outdoor hockey enthusiasts.

Reopened Ontario Provincial Parks That'll Give Families A Break

Gouvernement Printing Office, Washington, D. Presently, too little is known about the mortality of deer neonates to speculate whether its effects are compensatory or additive; however, preliminary evidence has indicated that some newborns killed by wolves and bears may be compromised nutritionally Kunkel and Mech 1994.

Shedding Light on the Problem of Deer Overgrazing in Carolinian Forests

Wolf Territories, Deer Movements and Distribution, and Predation Risk Olson 1938 , Murie 1944 , and Young and Goldman 1944 pioneered ecological study of wolves and their prey. Read more Read less Overall, the threats to values of the site can be assessed as low. All of this suggests that yarding is, at least in part, an antipredatory behavior not simply a strategy strictly linked to nutritional and thermal benefits.

Trillium grandiflorum height is an indicator of white

Alliaria petiolata, Garlic Mustard, populations have expanded significantly in Rondeau from 1994 to 1996.

Shedding Light on the Problem of Deer Overgrazing in Carolinian Forests

. Overall, the threats to values of the site can be assessed as low.

Seeing the forest for the deer: Do reductions in deer

All of the small mammals caught in the park are competent reservoirs of B. It has been well documented in studies across northern Minnesota that wolves primarily kill young of the year and older deer in the population, and these individuals are often compromised by deterioration of their overall physical condition or a specific abnormality Mech and Frenzel 1971, Fritts and Mech 1981, DelGiudice 1996, DelGiudice and Riggs 1996.

The Ecological Relationship of Gray Wolves and White

In this study we used ordination analyses DCA, CCA to examine the effect of changes in understorey light levels on plant communities in Rondeau Provincial Park and other Carolinian forests.
