3 Recognition and Assessment of Stress and Distress

Materials Twenty Chinese words representing stereotypically masculine jobs e.

Sexual suggestiveness

Participants judged the images for age, health, and attractiveness in monadic presentation design one after the other. While the involvement of the midbrain periaqueductal gray is well known Keay and Bandler 2002 , inactivation of the brain areas typically responding to a threat from a predator reduces the defense response s elicited by predator odor or exposure Blanchard et al. In Fiedler, Klaus; Justin, Peter eds.

Reward system

Journal of Experimental Psychology: Learning, Memory, and Cognition.

Motivation

CRH may be the key central integrator of the stress response as CRH-containing neurons in the paraventricular nucleus of the hypothalamus are the primary common path in the neural regulation of both the HPA and autonomic responses to stressors.

Reward system

Special Issue: Women's sexualities: New perspectives on sexual orientation and gender. Posttraumatic stress disorder Main articles: and , including sexual abuse, especially chronic abuse starting at early ages, has been found to be related to the development of high levels of dissociative symptoms, which includes amnesia for abuse memories.

Cross

Although postmortem and neuroimaging studies have found abnormalities in numerous regions of the reward system, few findings are consistently replicated. Diurnal variation in the responsiveness of the hypothalamic-pituitary-adrenal axis of the male rat to noise stress.

Motivation

The collection of similar stimuli and information from members of small-scale societies in anthropological fieldwork remains challenging. Increased awareness of child sexual abuse has encouraged more victims to come forward, whereas in the past victims often kept their abuse secret.
