The National Institutes of Health (NIH) Consensus Development Program: Rehabilitation of Persons with Traumatic Brain Injury

Through individual stories, this film describes how the strong forces at work in our society are causing children to consume too many calories and expend too little energy; tackling subjects from school lunches to the decline of physical education, the demise of school recess and the marketing of unhealthy food to children. The increased research activity in child and adolescent populations by the pharmaceutical industry can be further enhanced in several ways. African American women have higher bone mineral density than white non-Hispanic women throughout life, and experience lower hip fracture rates.

American Association of Colleges of Nursing (AACN) > News & Information > Position Statements & White Papers > Nursing Research

The two overarching goals are: 1 helping individuals of all ages to increase life expectancy and improve their quality of life, and 2 eliminating health disparities among different segments of the population in the United States. The sequence we envision is never expected to reach a terminus at which all the answers are known and all service interventions are perfected.

National Institutes of Health (U.S.) [WorldCat Identities]

People with TBI may be more likely to experience detrimental side effects from these drugs than people without TBI; therefore, additional caution should be used in prescribing and monitoring psychopharmacologic treatment. Despite the scientific evidence and availability of the state-of-the-art treatments utilized in this research protocol, such treatments are not readily available in the real world.

NIMH » Blueprint for Change: Research on Child and Adolescent Mental Health

It is important to note that the low licking mothers and pups showed heightened stress responsivity as adults and were more anxious and fearful of novel environments. .
