The Northwest German Basin and the Anglo-Dutch Basin of northern Europe U. A line joining the France, 1°55'E and England, 51°10'N.

## A Simple, Convincing Model For Calculating Water Saturations In Southern North Sea Gas Fields

Exploration Potential Although oil, gas, and condensate are produced from the Zechstein in Germany, Poland, and the Netherlands, where the source rock is the Stinkschiefer Shale, the Zechstein has never yielded much gas in offshore areas. When the Romans Britain in 410, the Germanic , , , and began the next great migration across the North Sea during the. Loss of reservoir quality in the carbonate facies adjacent to the evaporites, however, may substantially reduce the economic potential of these small traps.

Regional exposure events and platform evolution of Zhujiang Formation carbonates, Pearl River Mouth basin: evidence from primary and diagenetic seismic facies.

## **North Sea Oil and Gas Reservoirs—II**

Consequently the determination of the model does not require data from low porosity intervals and the resulting Sw<sub>h</sub> curves do not cross. According to Cornford 1998 and Bernard and Cooper 1983 , relatively little information concerning gas composition in the southern North Sea has been publicly released. As Germany's only outlet to the ocean, the North Sea continued to be strategically important through both World Wars.
