Agricultural Ventilation Concepts for Livestock Keeping

The bottom of the pad sits in a drain trough, and a water delivery pipe, with evenly spaced holes, runs across the top of the pad.

Ventilation for Livestock and Poultry Facilities

Insulated door closed to cover the evaporative cooling pad. When we look around we see that every house or farm is different and you will find that there are variations on these concepts. Certain preparations are required for the cold season.

Poultry Farm House Ventilation Solution

Research conducted by the U.

Tunnel Ventilation in Livestock Barns

Big exhaust fans in the end gable take the air out. Next to this, a healthy climate helps prevent an excessive need for antibiotics or vaccines. The sidewall fans are turned off, and the baffle board air inlet is closed to get the full wind-tunnel effect down the length of the barn.

Ventilation for Livestock and Poultry Facilities

This provides a beneficial wind chill effect that cools the animals by convection the removal of heat from the surface of an object by an airstream moving over it and exhausts this heat out of the building.

Ventilation Fans

And that is not all, different laws and legislation apply per country. This control strategy allows a staggered wind chill effect to match the ambient air conditions experienced by the animals.
