Shadow on the Earth (TV Episode 1988)

Two brothers growing up in a small Scottish mining town become convinced the albino man living in their street is an alien. I remember my astronomy professor saying something about if you wait for the sunrise and look in the opposite direction just as it rises you can see green in the sky. Sky gazers along the U.

Earth's Other Shadow (Good) Q5538 Robert Silverberg

As man with great scientific curiosity, Eratosthenes Of Cyrene later became the chief librarian at the Library of Alexandria in Egypt.

Is it ever possible to see Earth's shadow on other planets?

The Belt of Venus is quite a different phenomenon from the , which appears in the geometrically opposite part of the sky. Image credit: Cyrene placed a stick gnomon in the ground at a location in the city of Alexandria, which he knew was 5,000 stadia from Cyrene. Just a short anthology of nine stories, but not a bad one in the bunch, and most of them have an interesting understated humor and sometimes horror that I really liked.

Silverberg has always been good at evoking that. But once light hits something, it either gets absorbed or reflected based on the material it hits. Invisible and displaced, the alien tries to psychically make contact but their minds are unreceptive while awake.
