Interventional Cardiology

Diagonals — D1 appears normal. Results from the prospective multicenter DISCOVER-FLOW Diagnosis of Ischemia-Causing Stenoses Obtained Via Noninvasive Fractional Flow Reserve study. The gated SPECT images show normal left ventricular regional wall motion with LVEF of 70%.

The LAD Artery Explained! MyHeart

Angiography showed intant restenosis and 90% blocakage in RCA.

The LAD Artery Explained! MyHeart

IVUS can be used to identify plaque deposits that are blocking arteries as well as to assess the progression and regression of those deposits in patients being treated for coronary artery disease. Many thanks Rich It all depends on the angiogram and the character of the lesions and i would need to see it to comment to be honest.

Coronary angiogram

Distal — Small soft plaque is also seen in distal LCX causing approx.

FFRCT: Why Should Interventional Cardiologists Care?

Can you tell us about University Hospitals UH Health System? Taking this advocate roll has been therapeutic and helped this life changing event worth it. A nationwide evaluation of spontaneous coronary artery dissection in pregnancy and the puerperium.

The LAD Artery Explained! MyHeart

He also has type I DM. An IV line is inserted into a vein in your arm. He changed me from simvastatin to lipitor and gave me blood pressure med.

Incorporating Coronary CTA and HeartFlow Into the Clinical Workflow

As there is a small area of viable myocardium. Hi Doctor , I am 45 years old , I had a myocardial infarction two months ago , I went to a small unequipped hospital 30 minutes post chest pain , I recieved dinitra tab beneath my tongue and Aspirin 300 mg ...after one hour I went to a big hospital and the cardiologist advised me to perform angioplasty ASAP , I did it 5 hours post chest pain , the cardiologist told me that it is a diagnostic angipoplasty , no need to put a stent.
