The Effects of Alcohol and Drugs of Abuse on Maternal Nutritional Profile during Pregnancy

We are currently supported by RO1MH086629 GDS , the Vanderbilt Conte Center GDS and EJR , the McManus Foundation DLG , and the Vanderbilt Brain Institute. Metabolism of 14 C methamphetamine in man, the guinea pig and the rat. The Janus face of caffeine.

Developmental Consequences of Fetal Exposure to Drugs: What We Know and What We Still Must Learn

Developmental trajectories of cocaine-and-other-drug-exposed and non-cocaine-exposed children. A study of cortical morphology in children with fetal alcohol spectrum disorders. The maternal lifestyle study: effects of substance exposure during pregnancy on neurodevelopmental outcome in 1-month-old infants.

Drug abuse in pregnancy and neonatal effects (1977 edition)

Withdrawal from illicit or prescribed opiates incites Neonatal Abstinence Syndrome in neonates, which often requires treatment with morphine, diluted tincture of opium, or methadone with or without diazepam;. Gestational cocaine also increases the sensitivity to the conditioned rewarding effects of cocaine in male rats and modestly affected females , indicating alterations in the development of reward circuits. Int J Gynaecol Obstet 85: 170—171.

Effects of unconventional recreational drug use in pregnancy

Your doctor can play an important role in helping you quit, including giving advice and support with quitting and connecting you with other resources. These effects would include altering placental secretory activity or uteroplacental blood flow, for example.
