The benefits of this approach are particularly noteworthy in the younger population of pathogenic variant carriers, as a delay in surgery until the patient is older may reduce the risk of surgical complications. A tube is inserted through a patient's nose or throat , down through the esophagus and stomach then into the small intestine duodenum. Eur J Hum Genet 16 1 : 79-88, 2008.

Endocrine Neoplasia

The exact incidence of FNMTC is difficult to determine because the criteria used to qualify as a heritable condition varies among studies. In papillary and follicular cancer, thyroxine and TSH demonstrate the level of thyroid suppression, and thyroglobulin and thyroglobulin antibody levels are important markers for possible disease recurrence or metastases.
