## Technology

The framework includes the five broad domains of quality of life described earlier in this paper which are well-aligned with evidence and the views of Canadians: Prosperity, Health, Environment, Society, and Good Governance. But for this to succeed, the government will need to put in place the machinery to monitor progress, report on it to Canadians, measure how much impact government policies are having, and ensure that public policy adjusts to continually improve that impact and optimize the return on investments of public funds.

## A Strategy to Accelerate Change

To bring about meaningful reform, we must bring all these environmental factors into the equation.

## A Strategy to Accelerate Change

Am I correct or am I wrong? Senator Harder: I thank the senator for his question because it is a very important one. An activity would shift to the hospitals that can perform it profitably, while hospitals that cannot meet that standard would either become more efficient or reduce their efforts in this area, ideally by focusing on activities that they can do well.

## Debates

A well-being approach to recovery can underpin a focus on sustainability and preparedness for future public health emergencies, but also draw attention to distribution, helping prevent further widening of gaps in health, social, and economic outcomes.

## Debates

In the middle income quintile, 18. Response to question raised by the Honourable Percy E.
