Some analysts warn that, in some cases, biodefense policies designed to prevent or mitigate the risk of a bioterrorist attack could create hardships and even be counterproductive—for example, by pressuring countries burdened with other problems to satisfy regulatory and other biodefense-related demands. Researchers later suggest naming the agent that causes the disease after the infectious disease expert. Hitherto unknown to the public at large, he began his journey to fame at RCCG where he initially translated the sermons of its then Pastor and founder, Rev.

4 Conclusions and Recommendations

A comparison of Human Immunodeficiency HIV sero-positivity and Hepatitis B. As one example, the current select agents list does not include the uncounted numbers of biologically active molecules identified annually through industrial or federal government-sponsored NIH Roadmap drug discovery processes, many of which could be construed as potential threats.
