My Problems With the Theory of Evolution

Behe's most famous example is the bacterial flagellum -- a micromolecular rotary-engine, functioning like an outboard motor on bacteria to propel it through liquid medium to find food. In other cases, a protein serves several moonlighting functions within the same organism, and even within the same cell type.

My Problems With the Theory of Evolution

Just like the DVD analogy, genetic information can never be converted into proteins without the proper machinery. Only humans and a few other species possess this highly desirable trait.

My Problems With the Theory of Evolution

Evolutionists tell us this dragonfly has not shown up in the fossil record for 250-300 million years! For protozoa-to-person evolution to have worked over time, purely natural factors must have conceived, constructed, integrated, and implemented new proteins into old organisms.

What are some flaws in the theory of evolution?

In South Africa, the Rising Star hominin sample today numbers more than 2000 specimens from at least 18 individuals.
