Education and Work, Australia, May 2020

Surfing is very popular in Australia and so is the more traditional game of Cricket.

Australian Flood Risk Information Portal

As part of the study you will be asked about the frequency, severity and impact of your gut symptoms, and the dietary and lifestyle strategies you use to manage or optimise your gut health.

Australian Flood Risk Information Portal

Information provided here is for educational purposes and does not constitute financial product advice. About the study The project will be run in parallel, utilising identical methodology and collecting similar data, at two sites: Australia and Singapore.

Candidate Studies

A flood study is the scientific investigation of flooding in a particular area, usually the catchment of a river system. Private higher education institutions are likely to charge more for their courses. The purpose of a flood study is to predict the depth of water and the extent to which it will inundate the landscape in a modelled flood event.
