## Chapter 31

According to Dix on, bow-and-arrow technology was brought to the Americas only by the second tradition, because the atlatl was the primary hunting weapon of the first.

**Upper Devonian to Lower Mississippian conodont biostratigraphy of uppermost Wabamun Group and Palliser Formation to lowermost Banff and Lodgepole formations, southern Alberta and southeastern British Columbia, Canada: Implications for correlations and sequence stratigraphy**

Crawford was a native of Virginia, but at this time was residing near Brownsville, Pa. An almost complete specimen has a diameter of 270 mm

**Heterogeneity of conodont faunas in the Cache Creek Terrane, Canada; significance for tectonic reconstructions of the North American Cordillera**

Significant Paleozoic petroleum source rocks, their distribution, richness and thermal maturity in Canadian Williston Basin southeastern Saskatchewan and southwestern Manitoba.

## Chapter 31

In contrast, the Colorado section, above the Joli Fou shale and its equivalents, has been isolated with respect to oil migration from the underlying Mannville and pre-Mannville section. In: Advances in Organic Geochemistry 1985, Organic Geochemistry, v.

## 20SC11

Other Delaware bands moved north with the Iroquois after the American Revolutionary War to form two reserves in Ontario, Canada. On Mount Norquay they occur abundantly only in a ten foot band of limestone about 200 feet below the contact with the Rocky Mountain Quartzite Pennsylvanian? From there they gently arch outwards and downwards to meet the cystisepiments, where they may be reinforced by 53 smaller

tabulae.
