The pyramid-shaped Honey Locust tree *Gleditsia triacanthos* grows 3 or 4 feet a year to a mature height of 35 to 75 feet tall. Successful flower gardening in the South means growing plants that can take the intense heat and humidity. Hibiscus has a tropical feel to them and blends well in the Southern landscape.

Southwest Plants

It certainly looks at home there. The solution to this conundrum is choosing plants that are adapted to the rigors of the southwestern climate. The fragrant, golden yellow flowers can begin blooming even before winter has ended.

Some trees are much larger than others. Very minimal damage to the cover including scuff marks, but no holes or tears.

Trees and Shrubs for the Southwest: Woody Plants for Arid Gardens

Mix the Wildflower seeds with sand for better visibility.

Trees and Shrubs for the Southwest: Woody Plants for Arid Gardens by Mary Irish, Hardcover

This comprehensive title also includes clear and concise instructions on common tasks such as planting, staking, and pruning. If you want gnarled gray bark, very bright green, ferny leaves, and gracefully drooping branches, plant a California Pepper tree *Schinus molle*.

Southwest Plants

New to gardening in a hot dry place? The Desert Willow *Chilopsis Linearis* grows fast and produces pink orchid-like flowers all summer long.
