Aquatic Toxicology

In the presence of pesticides zoo-plankton display lower feeding rates which result in reduced growth and reproduction. The expanded use of biomarkers in natural environments, where organisms are exposed to multiple stressors natural and anthropogenic over time, will allow better detection of stress and provide an early indication of the potential for population-level effects. Alternatively, the data files can be downloaded as a.

Chapter 29. Ecotoxicology

. LD50 and LC50 LD50 Lethal Dose 50% is a statistically derived dose at which 50% of the animals will be expected to die.

Marine Mammal Ecotoxicology

Molluscs, crustaceans and amphibians appear to be more responsive than fish, with most effects being induced in low concentration ranges with the exception of disrupted in fish in the low range. The algal bioassay section not only focuses on test methods developed over the relatively long history of algal toxicity testing, but also includes many adaptations to traditional laboratory methods to provide more realistic phytotoxicity estimates. ECOTOX currently includes 1,018,565 test records covering 13,266 aquatic and terrestrial species and 12,223 chemicals, compiled from more than 50,000 references.

Marine Mammal Ecotoxicology

This paper summarizes the information obtained from an international survey dealing with the use of chronic bioassays for the control of wastewaters. .
