Combat Trauma Training

Actions taken for non-compliance can be severe and range from official warnings to fines being imposed on the institution, with the possibility of suspension of work or the revocation of research licenses. Pre-integrating civilian and military trauma centers into an all-hazards trauma system will form the foundation of a successful medical response. I said, 'We can do this, but we just need to use it in a different way.'

Prehospital Severe Trauma Management in Tactical Medicine

The animals—more than 8,500 goats and pigs each year—are often stabbed, shot with firearms, burned, and have their limbs amputated before being killed.

Combat Trauma Training

PY - 2001 Y1 - 2001 N2 - The Israel Defense Forces Medical Corps prepares Israeli physicians for their field duty as providers of prehospital trauma care under combat conditions.

Trauma Management: For Civilian and Military Physicians

Conclusions The Defence Medical Services have developed rapidly over recent conflicts. Troops are taught catastrophic haemorrhage control using pressure, elevation and, if required, tourniquets and simple airway manoeuvres and assessment of breathing and circulation. Truncal injuries accounted for just 14 per cent of the injuries seen and extremity injuries accounted for, a significant, 56 per cent of all the injuries observed.

Military Trauma Life Support: A comprehensive training program for military physicians — University of Miami's Research Profiles

The introduction of MERT was shown to improve survival, particularly in those with an injury severity score between 20 — 29 when compared with other pre-hospital systems. The Israel Defense Forces Medical Corps prepares Israeli physicians for their field duty as providers of prehospital trauma care under combat conditions. In another separate animal welfare complaint, filed by the PCRM to the USDAs APHIS against the University of Washington UW School of Paediatrics, 25 the PCRM claimed that this institution was breaking federal animal welfare laws because it used live anaesthetized ferrets as a model to train paediatric medical residents to insert breathing tubes, as would be used for emergency

procedures in premature babies.

Military ‘live tissue trauma training’ using animals in the US

It should be noted that the US Animal Welfare Act 28 does permit the use of live animals for research and training purposes in both the civil and military arenas.
