A Diabetes Education Model in Primary Care: Provider and Staff Perspectives

However, no recording of patient details is maintained at any of the health facilities, placing the responsibility to bring this information for continuity of care completely on the patient. Reluctance to start medication due to side effects.

Nutrition and the health care agenda: a primary care perspective

Mendis S, Al Bashir I, Dissanayake L, Varghese C, Fadhil I, Marhe E, et al. The data were initially coded into pre-specified codes based on the elements of the CCM: delivery design, information systems, decision support, self-management support, community links, and organisation of care.

Nutrition and the health care agenda: a primary care perspective

The number of consultations were limited, by use of tokens, at private health facilities, usually up to 50 during 6 h of OPD compared to an average of 75 patients up to 150 in 4 h at public health facilities.

A Diabetes Education Model in Primary Care: Provider and Staff Perspectives

Bayer and Fiscella 1999 also recommended implementing a reminder system in the electronic medical records to alert providers and office staff when a patient was due for a preventive screening that way patients were less likely to get lost to follow-up or be non-compliant or lack motivation. This article describes the evolution of group visits for those with diabetes, the theory underlying group visits for patients with chronic medical conditions, and the existing evidence for the effectiveness of this model.

Diabetes group visits: integrated medical care and behavioral support to improve diabetes care and outcomes from a primary care perspective

Primary care providers are the target of disease management interventions as they make up the majority of the providers taking care of patients with type II diabetes and not a specialist Forjuoh et al.
