## A Brief History of Education

In complying with requirements for data sharing, researchers need to carefully consider whether they have provided data which, if combined, risks violating participant anonymity. What is the difference between human values, ethical values and moral values? For hundreds of thousands of years, before the advent of agriculture, we lived as hunter-gatherers.

## Teaching Outside the Classroom

Students should use the skills and concepts they learned in an earlier portion of the course and apply them in a novel setting to help guide learning. Studies conducted on newborns demonstrate that newborns can already discriminate facelike shapes from straight lines. The invention of agriculture, beginning 10,000 years ago in some parts of the world and later in other parts, set in motion a whirlwind of change in people's ways of living.

## A Brief History of Education

In the 19th and 20th centuries, public schooling gradually evolved toward what we all recognize today as conventional schooling. They can perform mathematical operations and understand transformations, such as addition is the opposite of subtraction, and multiplication is the opposite of division. Throughout history, theorists have been fascinated with the distinctive character of human development, unique as compared with other mammals in having evolved a lengthy period of dependency known as childhood.

## Teaching Outside the Classroom

In the industrialized countries of the early twentieth century, there were no standards of protection for children.

## Teaching Outside the Classroom

Theoretical notions of childhood can be seen to reflect adult anxieties, concerns, and needs while at the same time functioning to teach children

themselves what it is to be a child and to provide a marker against which any child can be measured and compared.

### **Children in Time and Place: Developmental and Historical Insights**

The Convention is the most widely ratified international instrument with 196 States.
