harpoon and the proboscis with prey attached is drawn into the mouth and the prey digested. In 1969 divers discovered the habitat in the sandy seafloor near the Philippines and Indonesia.

Most Beautiful Seashells of The World

It is this group that makes up the majority of beach specimens seen in central and southern NSW. The species most dangerous to humans are the larger cones, which prey on small bottom-dwelling fish; the smaller species mostly hunt and eat marine worms.

A Beginner's Guide to Shells

His goal was to describe all the species in the world, and while he gave it a pretty good shot anyone know how many species he described in his lifetime? The first type is the flat shell. The sting of many of the smallest cone species may be no worse than that of a bee or hornet sting, but in the
