On average, the HHs use around five appliances at the same time, such as rice cooker, TV, mobile charger, fridge, or light bulbs. The initial indicators were developed before the field visit to the MHP case study site in Nepal, and they were later modified with the participation of stakeholders.

Suitability Assessment Program Guidance: Suitability Assessments

This is often due to a small budget or due to a lack of experience. Practical Enough to Use, Accurate Enough to Trust There is a tension in ergonomics between pinpoint accuracy and a tool that is practical enough for everyday practice.

While some used a single-indicator approach, e. Such computers do not deal directly with the numbers. Most of the reviewed methods in the energy technology and rural electrification context are rather suitable to compare different technology alternatives than to assess sustainability of specific projects.

Assessing suitability — Suitable Advice Institute

Among these technologies, large hydro was the most sustainable followed by small hydro, and coal made the last in that list. At the same time, the commercial financial sector is reluctant to engage in rural off-grid investments.
