## What is Chemistry?

Environmental chemistry examines chemical reactions and their effects on our environment by understanding how the chemicals got there, how they're transported, and what happens to them once they're there. Quantum chemical DFT calculations were employed to investigate bimolecular aggregates.

## Atmospheric chemistry

Here, a bimetallic NiFe selenide catalyst synthesized by facile selenization of NiFe Prussian blue analogue PBA metal—organic framework MOF nanoparticle precursors is reported for efficient OER in alkaline solutions. In this scheme, three or more reagents react such that each reagent is incorporated into the final product in a single step, eliminating the need for a multi-step synthesis that involves many purification steps.

## What is Chemistry?

In this work, the redox behavior of immobilized selenium on pyrite has been

Filesize: 14.91 MB

PBSS copolyesters containing different contents of spiroglycol SPG were prepared and characterized.

### **The Journal of Physical Chemistry C**

Sludges, particularly clay-enriched fluid tailings, are major waste streams disposed from mining and mineral processing industries. After cleaving, the three E samples are formed.

### **What is Chemistry?**

In particular, the catalyst of Co<sub>2</sub>-Ca<sub>4</sub>-Al<sub>3</sub> was recorded as a good catalyst with an optimum glycerol conversion of 100% and 1,2-PDO selectivity of 90. Also, the further characterization by XRD, HRTEM, and EDS element maps revealed that the distribution of Co was basically consistent with that of Al, while Ca species were adjacent to Co and Al species.

investigated using in situ scanning electrochemical microscopy SECM. Our investigations allow us to unambiguously confirm the successful fabrication of a highly oriented complete monolayer of heptacene and to describe its electronic structure. In detail, a series of poly butylene succinate-co-spirocyclic succinate
