EEOB Courses

How are symbioses organized on molecular, metabolic and ecological levels? Miniaturized anurans in particular often show a reduced number of digits and phalangeal elements , , and the loss or reduction of some cranial elements ., Prerequisites: EEOB 3410 EEOB 5420 Ecology of Inland Waters AU Semester alternating 4 credit units A study of the physical, chemical, and biological factors influencing the biological productivity of inland waters, and of techniques and equipment used in evaluating them.

Cooperative Breeding in Vertebrates

Repeatable to a maximum of 12 cr hrs or 5 completions.

Ecology and Evolution

This is because it requires an interdisciplinary approach that involves recognizing the set of neural and other features that allow a group of organisms to interact with the world in a unique way. Thus, the wet-forest leaf litter may represent an adaptive zone for diminutive frogs. Phylogenetic homogenization of amphibian assemblages in human-altered habitats across the globe.

Ecological Guild Evolution and the Discovery of the World's Smallest Vertebrate

Plant and animal communities of the New World tropics are compared and contrasted with temperate communities. This preference may enhance the fitness of progeny by reducing.

Continental Drift and Vertebrate Distribution, Annual Review of Ecology, Evolution, and Systematics

Outcrossing as a way of avoiding inbreeding depression has been especially well studied in birds. Fishes of myriad varieties are the main predators in most of the world's water bodies, both freshwater and marine. Ecology and Evolutionary Biology

FUTURE DIRECTIONS In spite of 50 plus years of experimental anatomical and physiological studies of vertebrate brains, there are still vast gaps in our understanding of how they are organized. BPBM 31879, same data as holotype, except collected 8 July 2008; BPBM 31880, same data as holotype, except collected 10 July 2008; BPBM 31881-82, same data as holotype, except collected 11 July 2008; BPBM 31884 collected by M. Topics include: genetic diversity, natural selection, speciation, physiological, population, and community ecology, maintenance of species diversity, conservation, species extinction, global environmental change, and invasion biology.
