- At Cambridge, Darwin read William Paley (1743-1805) and was impressed by Paley's views on natural theology and how the "book of nature" could lead one to God.
- After Cambridge, he focused on geology, and spent five years (1831-1836) on the HMS *Beagle*, commissioned to survey the coast of South America.
- His observations over those 5 years led him to formulate in 1838 the theory of evolution (he called it "descent with modification")

**What is narrative theology?**

Darwin himself used this argument extensively, and since his time it has been a mainstay of evolutionary thought.

## Natural Theology and Natural Religion (Stanford Encyclopedia of Philosophy)

New Political Science Reader Series. Scripture says that God created. They might even reference a Scripture which relates to their journey.

## CATHOLIC ENCYCLOPEDIA: Moral Theology

This marriage, he argues, was made in haste of the humanistic thought of the enlightened and post enlightenment day in reaction to the classical, theological, philosophical view of the world, which seemed to clash with the truths of evolution.

## Evolution

The Literal Meaning of Genesis. A contingent universe can only be accounted for if one makes free creativity a characteristic of the First Mover, which entails placing change and contingency within the First Mover itself.

## Natural Theology and Natural Religion (Stanford Encyclopedia of Philosophy)

Charleton, for instance, argues in his *The Darkness of Atheism Dispelled by the Light of Nature: A Physico-Theological Treatise* 1652 that the modern rejection of Aristotelianism establishes an even greater need to appeal to a designer to explain how inert atoms under mechanical laws can be fashioned into an intelligible and purposive order see Leech 2013. The mass of the people will derive only this one profit from such a method:

many will refrain from what is forbidden under pain of mortal and will do what is commanded under the same penalty, but they will care little for what is commanded or forbidden under pain of venial only; on the contrary they will seek a compensation in the latter for what they sacrificed to the grave commandments. God's omnipotence does not challenge the possibility of real causality for creatures, including that particular causality, free will, which is characteristic of human beings.

### **Scientific Essays and Lectures by Charles Kingsley: The Natural Theology of the Future**

It claimed that the fossil record showed a progressive ascent of animals, with current animals branching off a main line that leads progressively to humanity. I tentatively propose that it is directed to only some humans. These transdisciplinary insights raise the prospect that although science and religion invoke two incompatible languages, they are nonetheless making correlative claims.
