### Survival

A proposed prognostic 7-day survival formula for patients with terminal cancer.

### Cancer survival rate: A tool to understand your prognosis

The survival rates quoted are based on averages and don't take into account factors such as age cancer is extremely common in the over 70s , physical fitness which affects how much chemo you can take without being made extremely ill , the state of your immune system and whether or not your cancer is the only thing wrong with you.

### Understanding Cancer Prognosis

In contrast, no randomized controlled trial has been conducted on the effect of oxygen in patients who have advanced cancer and low oxygen saturation. Dyspnea was prespecified as a potential effect modifier. For example, statistical evidence suggests that.

Yet years later — against all the odds — they are still here and living life to the full.

### Is stage 4 cancer curable? Survival rates and treatments

You can also talk about this with the Cancer Research UK nurses on freephone 0808 800 4040, from 9am to 5pm, Monday to Friday. Patients who had been on oxygen at the time of admission to the service and those for whom oxygen therapy was initiated before identification of decreased oxygen saturation were excluded from the study.

## **Cancer Remission: Why Some Terminal Patients Beat the Odds**

To our knowledge, this study is the first to investigate the association of oxygen use with survival in patients with advanced cancer who have low oxygen saturation.
