

# Symposium, the Dead Softwood Timber Resource - proceedings of session held May 22, 23, 24, 1978, Spokane, Washington

The Project - Symposium: the Dead Softwood Timber Resource : proceedings of session held May 22, 23, 24, 1978, Spokane, Washington

Description: -

-  
Farm produce -- Storage -- Law and legislation -- United States  
Warehouses -- Law and legislation -- United States  
Forest products industry -- Congresses  
Forests and forestry -- United States -- Congresses  
Timber -- United States -- Congresses  
Conifers -- United States -- Congresses  
Symposium, the Dead Softwood Timber Resource - proceedings of session held May 22, 23, 24, 1978, Spokane, Washington  
-Symposium, the Dead Softwood Timber Resource - proceedings of session held May 22, 23, 24, 1978, Spokane, Washington

Notes: Includes bibliographies

## Temporal changes in stem decay and dead and sound wood volumes in the northeastern Canadian boreal forest

Less is known about how deterioration progresses as trees stand dead on the stump.

## Lumber and wood chips properties of dead and sound black spruce trees grown in the boreal forest of Canada

. All pairwise comparison p-values are corrected with a Tukey Adjustment for multiple comparisons. Tree stems were cut into logs that measured 2.

## Browse subject: Gymnosperms

Within each degradation class, the sample trees were selected from three merchantable diameter at breast height DBH over bark classes small, 9.

## Symposium: the dead softwood timber resource. Proceedings of session held May 22, 23, 24, 1978, Spokane, Washington (Conference)

Hence, the loss of wood volume attributable to stem decay in old-growth stands was cancelled out by the increased availability of DSW, with a slightly positive balance of 3.

## Timber supply and economic impact of mountain pine beetle salvage strategies

If the salvage strategy focuses on decreasing the impact on cash flows, achieving desirable ending inventory levels, avoiding salvage of stands after

shelf-life, and reducing impact on non-attack species, then the current harvest level will likely lead to a mid-term timber supply fall-down. Moreover, the cold climatic conditions that prevail in the study area may have also slowed down wood degradation processes compared with milder climates.

### **Temporal changes in stem decay and dead and sound wood volumes in the northeastern Canadian boreal forest**

Bell, United States Forest Service, and Or. The field study found that the severity of seasoning checks was most strongly correlated with tree diameter, and the effect of time-since-death was most pronounced at larger diameters.
