EEG Tests

They expect confirmation from the health care provider that their pain is real.

Clinical Neurophysiology

An exciting new application for neurophysiology is the development of brain-machine interfaces.

Neurophysiology Virtual Lab

For example, the physician acupuncturist does not rely solely on pathodiagnostic classifications such as herniated lumbar disc or lateral epicondylitis. They may also investigate excitation-secretion coupling at the synapse, which means that they are interested in how neuronal excitation and presynaptic machinery affect the release of neurotransmitters. The textbook Explain Pain can help to guide educational sessions with patients.

Clinical Neurophysiology

Neurophysiology tries to connect the role of the brain as nervous system controller with its role as nervous system member to better understand how nervous system problems happen and why. Single fiber EMG for special cases.

Home

Experts in neurology have studied EEG for many years and report that it is a safe procedure, with no apparent risks. With this in mind, the physician acupuncturist explores the NMS matrix of the pain patient for clinical syndromes that respond to NMS acupuncture inputs.

Neurophysiology Virtual Lab

This interactive, modular lab explores techniques for identifying and recording the electrical activities of neurons, using the leech as a model organism. Never ignore professional medical advice in seeking treatment because of something you have read on the site. At the periphery,

nociceptive fibers transmit sensations that may or may not be interpreted as pain.
