Welcome to the Flood Control District

The results are dead fish, disrupted food chains, and polluted water. Regular topping in the first couple of years after establishment can achieve this.

Drainage Channels

Simultaneously, the construction of narrow and more curving streets has increased porous surfaces and reduced conventional street expenses. Journal of Mountain Science 8: 103—107.

Types and causes of debris flow damage to drainage channels in the Wenchuan earthquake area

Regular cutting prevents a few species becoming dominant, while less frequently cut bank sides are favoured by small mammals. Geomorphology 80:310—324 We would like to thank Petr Šmilauer for revision of our statistics and helpful comments on earlier drafts, to David Boukal for help with the research planning, to Simona Poláková for advice on statistics and to Matthew Sweney for proofreading of our English.

Grass Drainage Channels

The slow-flowing waters of many lowland drainage channels can support a great variety of wetland plants, providing food and cover for a wealth of invertebrates and other wildlife, some of which can be very rare.

Surface Drainage Products and Solutions

Mission The Flood Control District works to reduce flood risk, promote stormwater quality and restore and enhance natural resource in an

environmentally sensitive manner for the communities throughout Contra Costa County. Vision We proactively work with communities, agencies, regulators, and other stakeholders to: Provide for safety through flood control protection facilities and programs.

Drainage Channels

Wetland species may be used for the bottom of a wet swale. Market and deliver high quality services. Cutting should be avoided between March and the end of August.
