The exact mechanism is still unknown, but once again we think CT is involved through some type of interference with the GIN life cycle. Several research groups are currently investigating this aspect of CT, which could have enormous implications for forage producers across the fescue belt. Disk mower knives are more rugged and less apt to break and, as farmers realized this, many started leaving a stubble of 2 inches — sometimes even less. The options for broadleaf weed control in established trefoil are limited to Princep Nine-T, Simazine 80W or Kerb. At maturity, plants have many highly-branched stems growing from a single crown; roots can produce new shoots Grant and Marten, 1985. Data is presented at revegetation meetings showing the range for birdsfoot trefoil to be from 12,000 ft.
