Is Nigeria losing its natural vegetation and landscape? Assessing the landuse

The average values cover a lot of variability among land systems and catenas.

Mapping Land Use and Land Cover

Lightly grazed and heavily grazed wild game-utilised rangelands under a fire suppression rangeland management regime had bush encroachment rates of approximately 34% and 56%, respectively, in 6 years. Land, labor, and input markets as well as marketing channels organized by middlemen are therefore characteristic of the sector. The overall classification accuracies in 1987, 2002 and 2015 was 90.

Mapping Land Use and Land Cover

In addition, the image classification for 1987, 2002 and 2015 produced an overall kappa coefficient of 0.

Mapping Land Use and Land Cover

Wilson 1965 Land and people in the Kano Close-Settled Zone.

Land use monitoring in the Nigerian savanna using aerial photographs. (1986 edition)

At the level of the household, because of family fission and the subdivision of holdings, inadequate output may be perceived as being due to a shortage of land rather than a growing population. There have been high emigrants into the city from within and outside Nigeria due to the recent industrial and commercial development in the area. The expansion of agriculture was observed across all ecoregions from the forest zone of southern Nigeria, where root and tree crops dominate, to the forest-savanna transition of the center of the country, where mainly root crops are found, to the grain belt of semiarid northern Nigeria.
