3 THE DIVERSITY OF STUDENTS WITH DISABILITIES

The term does not include deaf-blindness. Identification occurs after school entrance through a preplacement evaluation, which usually occurs because a teacher has referred the child due to severe and chronic achievement problems Reschly, 1987b.

Effect of a classroom

Others have suggested that fiscal incentives, such as basing allocations on counts of students with disabilities, can directly influence the number of students who get referred and placed in special education Mehan, 1995. Some students are so ill that they cannot participate in the general school curriculum or activities associated with standards-based reform. Some spend only minutes each week with a specially trained teacher, others the whole day.

Warnock Report (1978)

Students with autism, deaf-blindness, mental retardation, and multiple disabilities are least likely to spend much time in the regular classroom. As an introductory course, students become familiar with terminology, current trends, and issues related to the field.

Effect of a classroom

The IEP process has allowed us to carefully plan and individually tailor Michael's educational goals and objectives.

875 F2d 954 Timothy v. Rochester New Hampshire School District

As a result, carers are more likely to report more difficulties in social interaction in those with higher IQ than those with lower IQ scores who tend to display reduced capacity for both verbal and nonverbal skills. The most commonly used taxonomies combine medical and social approaches in

ways that are not always clear-cut. Emotional adjustment involves attitudes, values, and emotions that can facilitate or interfere with academic and social behaviors in a variety of settings.

The contributions of Luria and Reitan to developmental neuropsychology and to the understanding of neuropsychologically compromised children

This two-part definition means that not all students with disabilities are eligible to receive special education services.
