## Epidemiology of drinking, alcohol use disorders, and related problems in US ethnic minority groups

We are owned and operated by: Reflections Recovery Center and Northern Arizona Center for Addiction. New York: Oxford University Press, 1994.

## The impact of casinos on fatal alcohol

This research established a firm connection between heavy alcohol consumption and liver disease. A link between highly stigmatized views of alcoholism and lack of services suggests that stigma reduction should be integrated into public health efforts to promote alcohol treatment. Social epidemiology of chronic liver disease and cirrhosis mortality in the United States, 1935—1997: Trends and differentials by ethnicity, socioeconomic status, and alcohol consumption.

## Prevalence of Alcoholism in the United States

Table 1 Liver Function and Alcohol Intake Liver Function No. The analyses reported here are restricted to these 1,440 couples. Per capita alcohol consumption and liver cirrhosis mortality in 14 European countries.

## Epidemiology

One of the most effective weapons in the fight against alcoholism and alcohol-related deaths is advocacy, and you may wonder what you can do at the personal level to curb these unfortunate alcohol statistics. It is also possible that some people consciously use alcohol as an excuse for violent behavior and that alcohol appears to be associated with violence, because both heavier drinking and violence have common predictors, such as an impulsive personality.

## **PA**

Despite evidence of stigma toward individuals with an alcohol disorder, little is known about its relation with treatment-seeking behavior. For example, states with high drinking rates often report high drunk driving accident and death rates as well as a higher number of deaths caused by alcohol-related illnesses such as cirrhosis and liver disease. Rates of IPV by Drinking Status and Ethnicity Another way to look at the relationship between IPV and drinking is to examine the rates of reported IPV among drinkers and abstainers.

### **Epidemiology**

It should be noted, however, that because this is a general household sample of couples, and not a clinical sample in which severe cases of violence are found, the proportion of couples reporting the most severe types of violence is relatively small. Many problems exist with these data and study designs, making determination of a causal relationship difficult.
