Video Enhanced Contrast Microscopy

At the completion of sectioning the series is divided into segments of appropriate length for temporary storage in some suitable container having a clean, not entirely smooth paper bottom such as the boxes in which hosiery is sold. Adjacent empyemata may also give rise to pericarditis.

Staining

By causing a current of water to flow through, the specimens are washed rapidly without danger of loss. Also through the cross references between these special articles it is possible to follow out completely the methods which can be applied to any particular type of material.

Browse subject: Microscopy

The specimen is placed in the alcohol; it will rest on the oil and gradually sink into it as the alcohol it contains is displaced.

Browse subject: Microscopy

EXAMINATION OF THE PLEURA The pleurae should be examined as soon as exposed.
