Roadway Design Manual: Freeways

After the data have been transferred to the computer, and as the graphics features are edited, the presence of manual field notes is invaluable for clearing up any ambiguous labeling or numbering of survey points. A neat, well-labeled sketch should accompany each step of the computation. C Profile View A B C2 A C1 Bucking-in, or interlining Ground B1 B C Plan View FIGURE 5-10 121 B2 122 CHAPTER FIVE CL CL CL St.

Kavanagh B., Surveying

Area Computation by coordinates Refer to the traverse shown in Example 6-5, and the computed coordinates shown in Figure 6-19, which are summarized next: Station North East A 1,089.

Kavanagh B., Surveying

The format chosen reflects the design software program used to process the field data. Power is supplied by two to six AA batteries, or two C cell batteries; battery type depends on the model. With dual-axis compensation, the central processing unit of the instrument can measure the effects of the standing axis tilt and correct all subsequent horizontal and vertical angles.

Roadway Design Manual: Freeways

The buckingin also known as balancing-in or interlining procedure is as follows. The display windows for horizontal and vertical angles can be located at both the front and rear of some instruments for easy access.
